

Build on formwork expertise

Quality certificate

Excellent product quality with the Doka Quality Management System

Doka Industrie GmbH hereby confirm that all supplied products meet the requirements of the relevant standards, are safety-proven in application and have been manufactured in accordance with our consistently high quality standards.

It is on principle that our interaction with external and internal customers is prioritised according to 1. Quality, 2. High supply availability and 3. International competitiveness.

We run a corporate wide quality management system to ISO 9001 which is independently monitored by internal and external auditing bodies. Our management system has an established record of state accredited certification awarded on the basis of annual audits.

We only operate with approved suppliers able to fulfil our stringent quality criteria and that are monitored accordingly by means of supplier auditing and supplier rating.

Monitoring of incoming goods inspection and production processes is carried out by our own independent quality assurance system and is based on precise inspection specifications and their corresponding evaluation thus ensuring our excellent product quality.

In addition, there are the building regulations approvals and permanent monitoring by external inspection institutes and authorities which are carried out for manufacturing processes (welding, bonding etc.) as well as for the products (floor props, formwork beams, load bearing towers etc.) themselves.

We always make use of resource-friendly technologies in the manufacture of our products and by doing so have managed to achieve a high level of environmental engineering. Products with such high quality and durability create added value for our customers and make a strong contribution to their progress and success.
